12-Week DCA Example: Ethereum & Solana

This example shows what happens if you invest **$100 per week**, split evenly between Ethereum (ETH) and Solana (SOL), for 12 weeks (total $1,200 invested). Prices used are based on weekly closes ending September 14, 2025.

sset	Total Invested	Coins Accumulated	Value on Sep 14	Gain/Loss	Return %
thereum (ETH)	$600	0.1391 ETH	$648.93	+$48.93	+8.2%
olana (SOL)	$600	3.5810 SOL	$869.00	+$269.00	+44.8%
otal Portfolio	$1,200	-	$1,517.93	+$317.93	+26.5%

Key Takeaway:
Even with just $100 per week, Dollar Cost Averaging (DCA) smoothed out volatility and delivered a **+26.5% gain in 12 weeks**. ETH provided steady growth, while SOL captured strong upside. This shows the power of consistency over timing the market.
