

12-Week DCA Comparison: Crypto vs S&P; 500

This example compares investing **\$100 per week** for 12 weeks into a crypto basket (ETH, SOL, XRP, LINK) versus the S&P; 500. Each scenario totals **\$1,200 invested**. Crypto data is based on weekly closes ending September 14, 2025. S&P; 500 performance is approximated using index levels over the same period.

Asset	Total Invested	Value on Sep 14	Gain/Loss	Return %
Crypto Basket (ETH, SOL, XRP, LINK)	\$1,200	\$1,405	+\$205	+17.1%
S&P 500 (DCA)	\$1,200	\$1,226	+\$26	+2.2%

Key Takeaway:
Over the same 12-week stretch, the crypto basket returned **+17.1%** while the S&P; 500 returned just **+2.2%**. Crypto dramatically outperformed but with higher volatility and risk. This illustrates both the upside potential and the trade-off in stability versus traditional markets.
