

12-Week DCA Example: ETH, SOL, XRP, LINK

This example shows what happens if you invest **\$100 per week**, split evenly into Ethereum (ETH), Solana (SOL), Ripple (XRP), and Chainlink (LINK), for 12 weeks (total \$1,200 invested). Prices used are based on weekly closes ending September 14, 2025.

Asset	Total Invested	Coins Accumulated	Value on Sep 14	Gain/Loss	Return %
Ethereum (ETH)	\$300	0.0696 ETH	\$325	+\$25	+8.2%
Solana (SOL)	\$300	1.7905 SOL	\$434	+\$134	+44.8%
Ripple (XRP)	\$300	586 XRP	\$311	+\$11	+3.6%
Chainlink (LINK)	\$300	26.5 LINK	\$335	+\$35	+11.7%
Total Portfolio	\$1,200	-	\$1,405	+\$205	+17.1%

Key Takeaway:
Even spreading \$100 per week across 4 major cryptos, Dollar Cost Averaging (DCA) smoothed out volatility and delivered a **+17.1% gain in 12 weeks**. SOL drove most of the upside, while ETH, XRP, and LINK added steady growth. This shows the value of consistency and diversification over trying to time the market.
